## PURPOSE

This Marine Notice establishes the Republic of the Marshall Islands (RMI) Maritime Administrator (the “Administrator”) requirements for implementing the *International Convention for the Control and Management of Ships’ Ballast Water and Sediments* (BWM Convention).

This Notice supersedes Rev. Apr/2023. In addition to streamlined content, footnote 6 has been inserted to refer to the amended Appendix II of the BWM Convention (IMO Resolution [MEPC.369\(80\)](#)).

Accompanying guidance on definitions, ballast water exchange (BWE), ballast water management plans (BWMP), and ballast water management (BWM) with respect to offshore operations, yachts, and coastal States can be found in RMI Marine Guideline [2-14-1](#).

## APPLICABILITY

This Notice applies to all RMI-flagged vessels in accordance with Article 3 of the BWM Convention. Vessels to which the BWM Convention does not apply are summarized as those that:

- are not designed or constructed to carry ballast water;
- only operate in RMI waters;
- only operate in waters under the jurisdiction of another Party, subject to the authorization of that Party of such exclusion<sup>1</sup>;
- only operate under the jurisdiction of one Party and on the high seas; or
- carry in sealed tanks permanent ballast water that is not subject to discharge.

## BACKGROUND

The BWM Convention entered into force on 08 September 2017. The RMI is a Party to this Convention and acceded to it on 06 November 2009.

## REQUIREMENTS

### 1.0 Exemptions, Exceptions, and Equivalent Compliance

The circumstances in §1.1, §1.2, and §1.3 of this Notice may be considered when applying the provisions of the BWM Convention.

#### 1.1 Exemptions

---

1. See IMO Circular [BWM.2/Circ.52/Rev.1](#).

A Party or Parties in waters under their jurisdiction may grant exemptions to Regulation B-3 or C-1 in accordance with Regulation A-4. Such exemptions must take into consideration IMO Resolution [MEPC.289\(71\)](#).

## 1.2 Exceptions

See Regulation A-3 for exceptions, including those for:

- .1 ensuring the safety of the ship in emergency situations;
- .2 accidental damage to the ship;
- .3 the purpose of avoiding or minimizing pollution;
- .4 uptake and discharge on the high seas of same ballast water and sediments;  
or
- .5 discharge of ballast water and sediments from a ship at the same location where the ballast water originated, and provided that no mixing with unmanaged ballast water and sediments from other areas has occurred.

## 1.3 Equivalent Compliance

Pleasure craft<sup>2</sup> used solely for recreation or competition or craft used primarily for search and rescue, less than 50 meters in length, and with a maximum ballast water capacity of eight cubic meters may satisfy the requirements of Regulation A-5 by applying the guidelines of IMO Resolution [MEPC.123\(53\)](#). See also the RMI Yacht Code ([MI-103](#)) for the application of the BWM requirements to yachts.

## 2.0 Ballast Water Management Plan – Regulation B-1

- 2.1 Each ship must have on board and implement a ship-specific Ballast Water Management Plan (BWMP). To facilitate the implementation, administration, and execution of this, there must be on board a designated officer in charge of the plan (Regulation B-1.5).
- 2.2 A BWMP must be approved by the Administrator directly, or by the vessel's Recognized Organization (RO) on behalf of the Administrator.
  - .1 It must consider:
    - a. IMO Resolution [MEPC.127\(53\)](#), *Guidelines for ballast water management and development of ballast water management plans (G4)*, as amended<sup>3</sup>; and

---

2. **Pleasure craft** means a private yacht as defined in the RMI Maritime Regulations ([MI-108](#)) §1.03.13.

3. **IMO Assembly Resolution A.868(20)**, *Guidelines for the control and management of ships' ballast water to minimize the transfer of harmful aquatic organisms and pathogens*, has not been revoked by IMO Resolution

- b. Regulation B-5.1, which requires that all ships remove and dispose of sediments from spaces designated to carry ballast water.
- .2 It may incorporate the non-mandatory elements of G4, Part B, section 4. This can include contingency measures (IMO Circular [BWM.2/Circ.62](#)) for managing non-compliant ballast water discharges so that they do not pose unacceptable risks to the environment, human health, property, and resources.
- 2.3 Ships operating in Antarctic waters must take into account the problems of ballast water exchange (BWE) in cold environments and in Antarctic conditions. Thus, consideration must be given to IMO Resolution [MEPC.163\(56\)](#) when a BWMP is developed.

### **3.0 Ballast Water Management for Ships - Regulation B-3**

Each ship is required to employ one of the following BWM practices in accordance with the BWM Convention implementation schedule:

- 3.1 BWE to standard D-1;  
  
Ship-specific procedures for conducting BWE, must take into consideration IMO Resolution [MEPC.288\(71\)](#). Also see RMI Marine Guideline [2-14-1](#).
- 3.2 BWMS to standard D-2;
- 3.3 Discharge ballast water to a reception facility designed in accordance with the requirements and guidelines developed by the IMO for such facilities; or
- 3.4 Other methods of BWM that may be accepted as alternatives and that provide the same level of protection to the environment, human health, property, or resources and are approved in principle by the MEPC.

### **4.0 Ballast Water Management System**

- 4.1 The standard in Regulation D-2 must be met.
- 4.2 The BWMS must be approved as meeting the applicable IMO instruments. See RMI [Technical Circular 1](#), *Shipboard Equipment and Service Provider Approvals*. The Administrator accepts BWMS installations on RMI-flagged vessels that have been approved by, or on behalf of a Party to the BWM Convention.
  - .1 An Administration's BWMS approval for installation on a ship operating under its authority may be based on testing carried out by another Administration.

---

[MEPC 127\(53\)](#). MEPC 63 agreed that the Guidelines adopted after 2004 for the uniform implementation of the BWM Convention have effectively superseded the Guidelines adopted by IMO Assembly Resolution A.868(20). For practical reasons, the BWMPs, approved in accordance with IMO Assembly Resolution A.868(20), should remain valid until the BWMP requires revision due to the installation of a BWMS.

- .2 In these cases, the D-3 approval (Approval Requirements for BWMSs) may be conveyed by issuing an International Ballast Water Management (IBWM) Certificate.
  - .3 BWMS type-approved on or after 13 October 2019 must comply with the BWMS Code.
  - .4 When selecting a ship's BWMS, the operator must consider the specific application for which the system is approved, such as:
    - a. specific ballast water capacities;
    - b. flow rates;
    - c. salinity or temperature regimes; and
    - d. other limiting operating conditions or circumstances, as appropriate.
  - .5 When the BWMS Type Approval Certificate or supporting documents indicates limiting conditions, the crew must be made aware of them.
- 4.3 A ship fitted with a BWMS must carry a copy of the BWMS's Type Approval Certificate.

## **5.0 Commissioning Testing**

- 5.1 The purpose of a commissioning test is to validate the installation of a BWMS by demonstrating that its mechanical, physical, chemical, and biological processes are working properly.
- 5.2 Beginning 1 June 2022<sup>4</sup>, upon completion of the surveys required under BWM Convention Regulation E-1.1.1 (initial survey for new ships under construction) and Regulation E-1.1.5 (existing ships retrofitting BWMS)<sup>5</sup> must confirm that a commissioning test has been conducted.
- 5.3 The commissioning test must take into account the relevant guidelines ([BWM.2/Circ.70/Rev.1](#)).
- 5.4 The entity conducting the commissioning test, must be independent of the BWMS manufacturer or supplier and to the satisfaction of the ship's RO issuing the IBWMC. Operators must contact their ROs to ascertain that the entity which they intend to engage for the commissioning testing is acceptable.

---

4. See IMO Resolution [MEPC.325\(75\)](#).

5. See [BWM.2-Circ.66-Rev.5](#) for unified interpretations regarding Regulation E-1 surveys.

## **6.0 Ballast Water Management System Failures**

- 6.1 Any BWMS failure must be reported to the vessel's RO without delay. A brief description of the failure along with a proposed BWMS repair plan must also be communicated in a timely manner. The malfunctioning BWMS must be recorded in the Ballast Water Record Book (BWRB). When the repairs are concluded, the ship's RO must be notified.
- 6.2 Where the ship has to manage non-compliant ballast water discharges, the port State control authorities must be contacted by the ship or company to discuss contingency measures, guidance on which can be found in [BWM.2/Circ.62](#).
- 6.3 The Administrator accepts Ballast Water Exchange (BWE) in lieu of using the BWMS when this method is included as a contingency measure in the ship's approved BWMP. Concurrence from the coastal State must be obtained before this option is used.

## **7.0 Training and Education**

- 7.1 Vessel crew training and familiarization in ballast water and sediments management by the owner or operator is essential. Officers and crew must be familiar with their duties in managing the ballast water for the ship they serve on, and be instructed in the requirements of:
  - .1 the BWM Convention;
  - .2 the implementation of the BWMP;
  - .3 BWE and sediment management procedures;
  - .4 the Ballast Water Record Book (BWRB), and reporting functions; and
  - .5 any system limitations of the BWMS.
- 7.2 Owners and operators of ships using a BWMS must ensure the crew is provided with training for BWMS operations and maintenance.

## **8.0 Ballast Water Record Book – Regulation B-2**

- 8.1 The BWM Convention requires each ship to maintain, onboard, a BWRB to record each ballast water operation, including discharges at sea, to reception facilities (B-3.6), and cases of exemptions (A-4), exceptions, and accidental discharges (A-3).
- 8.2 The BWRB, that may be an electronic record system, or that may be integrated into another record book or system and, must contain at least the information specified in Appendix II of the BWM Convention.<sup>6</sup>

---

6. Beginning 1 February 2025, Appendix II – Form of Ballast Record Book, will be replaced by an updated version as provided in IMO Resolution [MEPC.369\(80\)](#) and explained in MG [2-14-1](#).

- 8.3 Each operation concerning ballast water must be fully recorded without delay in the BWRB. Each entry must be signed by the officer in charge of the operation concerned and each completed page must be signed by the Master.
- 8.4 The BWRB must be kept readily available for inspection at all reasonable times and, in the case of an unmanned ship under tow, may be kept on the towing ship.
- 8.5 The BWRB entries are to be maintained on board the ship for a minimum of two years after the last entry has been made and thereafter in the Company's control for an additional minimum period of three years.
- 8.6 Refer to MG [2-14-1](#) for guidance on recording information in the BWRB.

## **9.0 IBWM Certificate**

- 9.1 Vessels successfully completing a survey in accordance with Regulation E-1 will be issued an IBWM Certificate per Regulation E-2.
  - .1 Vessels of 400 gross tonnage (GT) and above to which the BWM Convention applies, excluding floating platforms, floating storage units (FSUs), and floating production storage and offloading units (FPSOs), are subject to the surveys specified in BWM Convention Regulation E-1.
  - .2 Regulation E-1, paragraph 2 requires the Administrator to establish appropriate measures for ships that are not mandatorily subject to the survey and certification provisions of Regulation E-1, paragraph 1. The Administrator has determined that:
    - a. vessels of less than 400 GT (e.g., pleasure craft and offshore support vessels) must undergo survey and certification in accordance with Regulation E-1 paragraph 2 because such vessels are not excluded from the BWM Convention's definition of ships; and
    - b. floating platforms, FSUs and FPSOs must undergo survey and certification in accordance with Regulation E-1 paragraph 2 because these vessels are included within the BWM Convention's definition of ship.
- 9.2 Given §8.1.1 and §8.1.2 above, all ships require an IBWM Certificate from the Administrator, except:
  - .1 Under the BWM Convention, operators of floating platforms, FSUs and FPSOs must consult the coastal State in which the unit is operating to establish survey and certification requirements. This is because the Administration is the authority that issues the IBWM Certificate and Article 1 defines the 'Administration' as the Government of the coastal State concerned. See RMI Marine Guideline [2-14-1](#) for additional guidance.

- .2 If requested by the Government of the coastal State, the Administrator may survey and issue the IBWM Certificate to the vessel in accordance with Regulation E-3.
  - .3 Vessels utilizing equivalent compliance set out in Regulation A-5 - *Equivalent compliance*.
- 9.3 Some ships, such as Mobile Offshore Units (MOUs), including Mobile Offshore Drilling Units (MODUs), may not need ongoing certification because they operate exclusively within waters under the jurisdiction of a single Party. IMO Circular [BWM.2/Circ.52/Rev.1](#) should be applied in re-positioning and dry-docking voyages of these ship types.
- 9.4 See also RMI [Technical Circular 25](#) for Administrator policies with respect to survey and certification, including decoupling/recoupling the International Oil Pollution Prevention (IOPP) Renewal Survey.

## 10.0 Special Requirements in Certain Areas

Under Regulation C-1, Parties to the BWM Convention may take additional measures consistent with international law necessary to prevent, reduce, or eliminate the transfer of harmful aquatic organisms and pathogens. Ships are required to meet these standards.

## 11.0 Port State Control

- 11.1 RMI vessels may be inspected in any port or offshore terminal of another Party to the BWM Convention in accordance with Article 9 of the BWM Convention, taking into consideration IMO Resolution [MEPC.252\(67\)](#), *Guidelines for Port State control under the BWM Convention*, which establishes a four-stage inspection procedure:

<b>Stage one</b>	initial inspection to focus on documentation and nominated, trained ship's officer for ballast water management on board the ship;
<b>Stage two</b>	more detailed inspection - an operational check of the BWMS;
<b>Stage three</b>	sampling by indicative analysis to determine if the D-2 standard is being met; and
<b>Stage four</b>	detailed analysis, if necessary, to verify compliance with the D-2 standard.

- 11.2 A sampling of the ship's ballast water by port State control (PSC) must be representative of the whole discharge<sup>7</sup>. See IMO Resolution [MEPC.173\(58\)](#) and IMO Circular [BWM.2/Circ.42/Rev.2](#).

---

7. MEPC 67 concluded it is not recommended that ballast water sampling be performed during ballast tank stripping operations.

- 11.3 IMO has implemented a Trial Period for Sampling and Analysis of two to three years during which ships will not be penalized for exceeding the D-2 standard provided that:
- .1 the BWMS is approved in accordance with regulation D-3;
  - .2 the BWMS has been installed correctly and maintained in accordance with the manufacturer's instructions;
  - .3 the approved BWMP has been followed, including the operational instructions and the manufacturer's specifications for the BWMS; and
  - .4 the self-monitoring system of the BWMS indicates that the treatment process is working properly.
- 11.4 The designated officer specified in the BWMP is to be familiar with the inspection process, including how to facilitate the inspection and sampling processes, and witnessing such, as appropriate. Additional guidance and general recommendations on methodologies and approaches to sampling and analysis are provided in IMO Circular [BWM.2/Circ.42/Rev.2](#).
- 11.4 Officers duly authorized by a Party may inspect the BWRB on board any ship to which this regulation applies while the ship is in its port or offshore terminal, and may make a copy of any entry, and require the Master to certify that the copy is a true copy. Refer to section 8.0 above, for requirements on the BWRB.

## **12.0 Coastal State Requirements**

Coastal States may impose unique requirements for BWM. All RMI-flagged vessels that enter the jurisdiction of these States are required to comply with these requirements, including any additional regional or local mandates within such coastal States. See RMI Marine Guideline [2-14-1](#) for additional guidance.
